

How to Set Up a Proxy and Activate **Kaspersky** Application in Windows 7, Windows 8, and Windows 10

Here is how to set a proxy manually in Windows 7, Windows 8, and Windows 10 (using Internet Options):

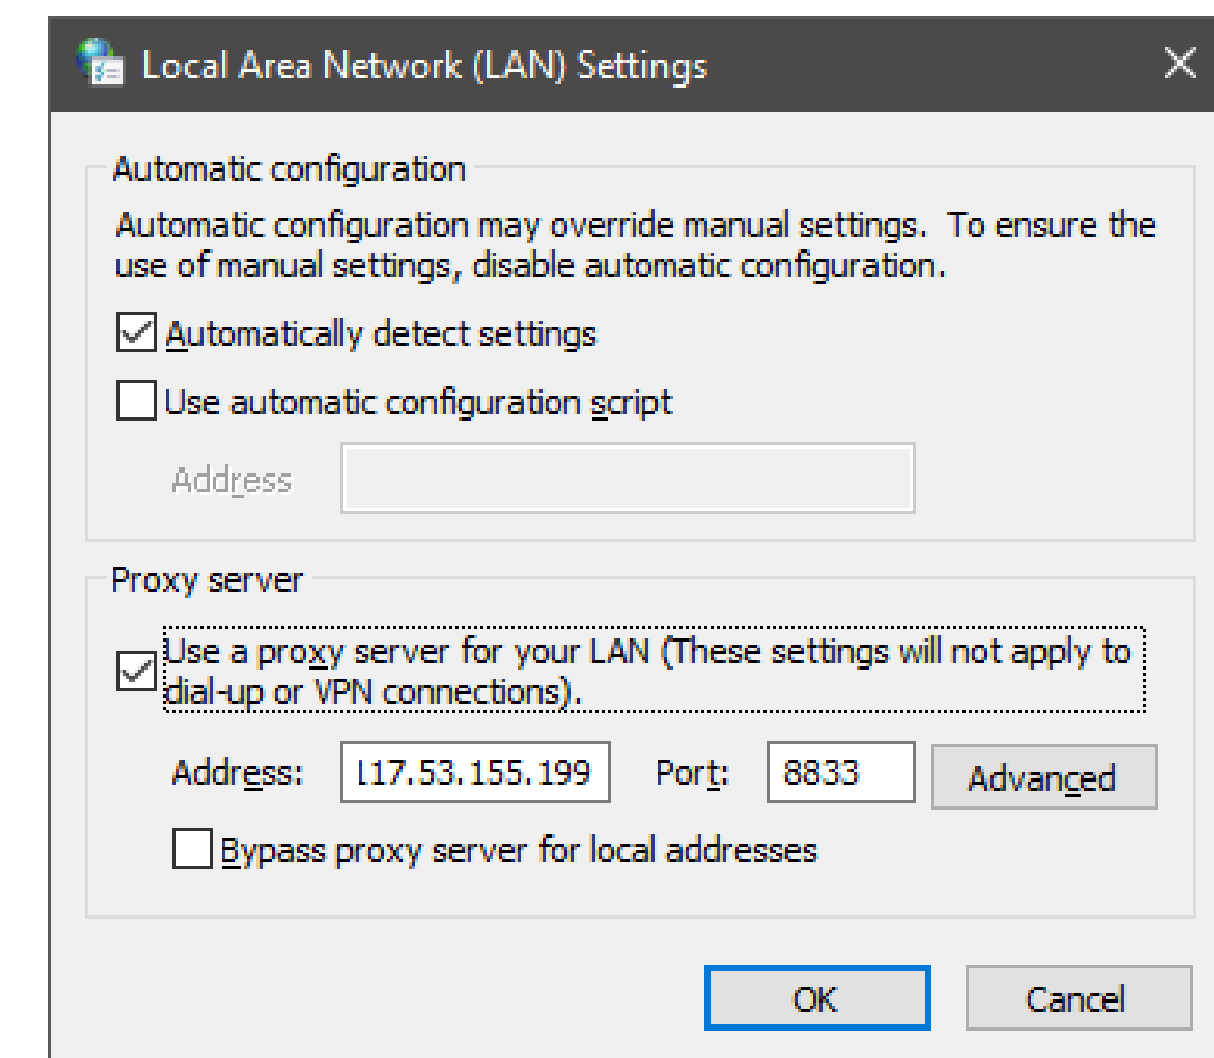

Step 1: Click on the Windows Start button and search for **Internet Options**

Step 2: In Internet Options, go to **Connections**, then click on **LAN settings**.

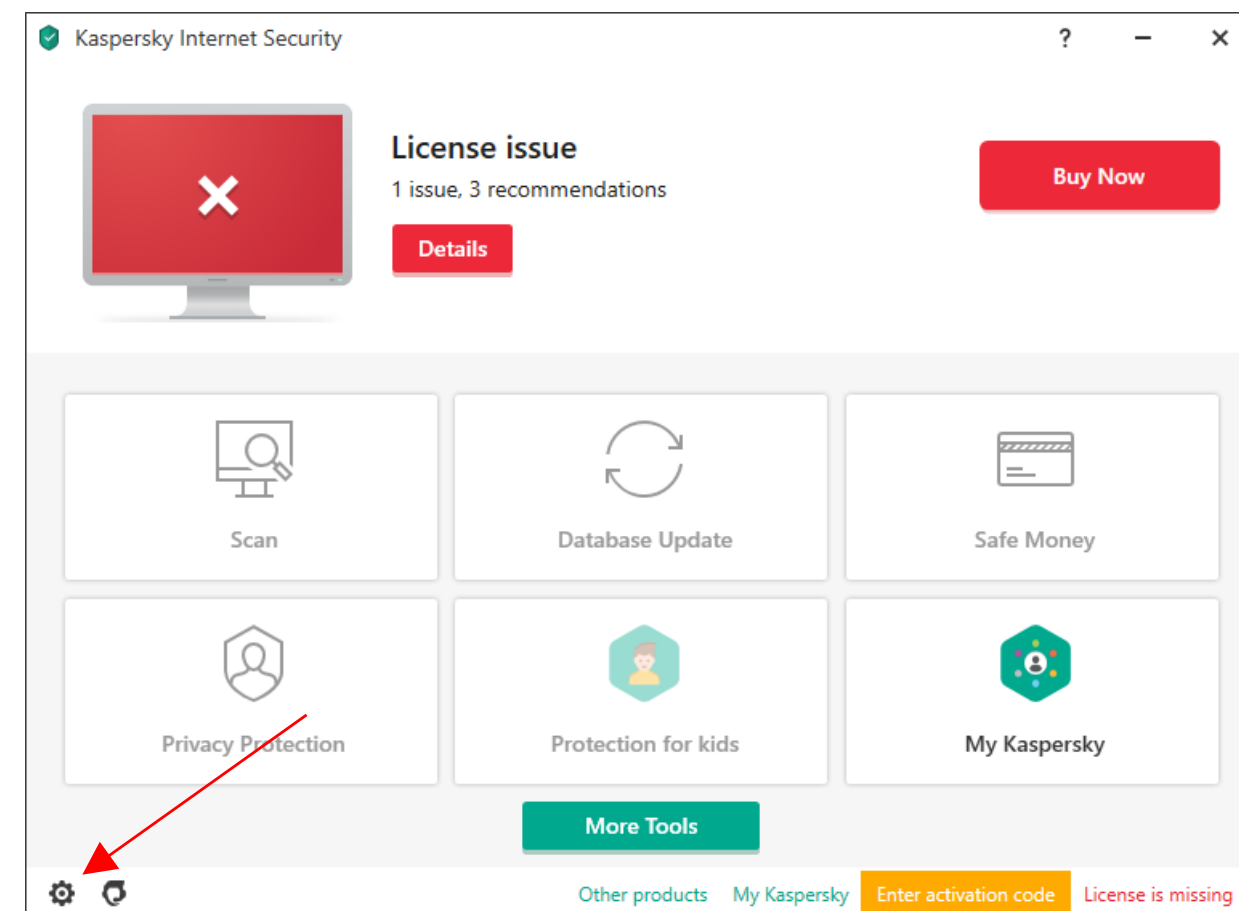

Step 3: Under Proxy Server, please type the IP address (**117.53.155.199**) and port number (**8833**).

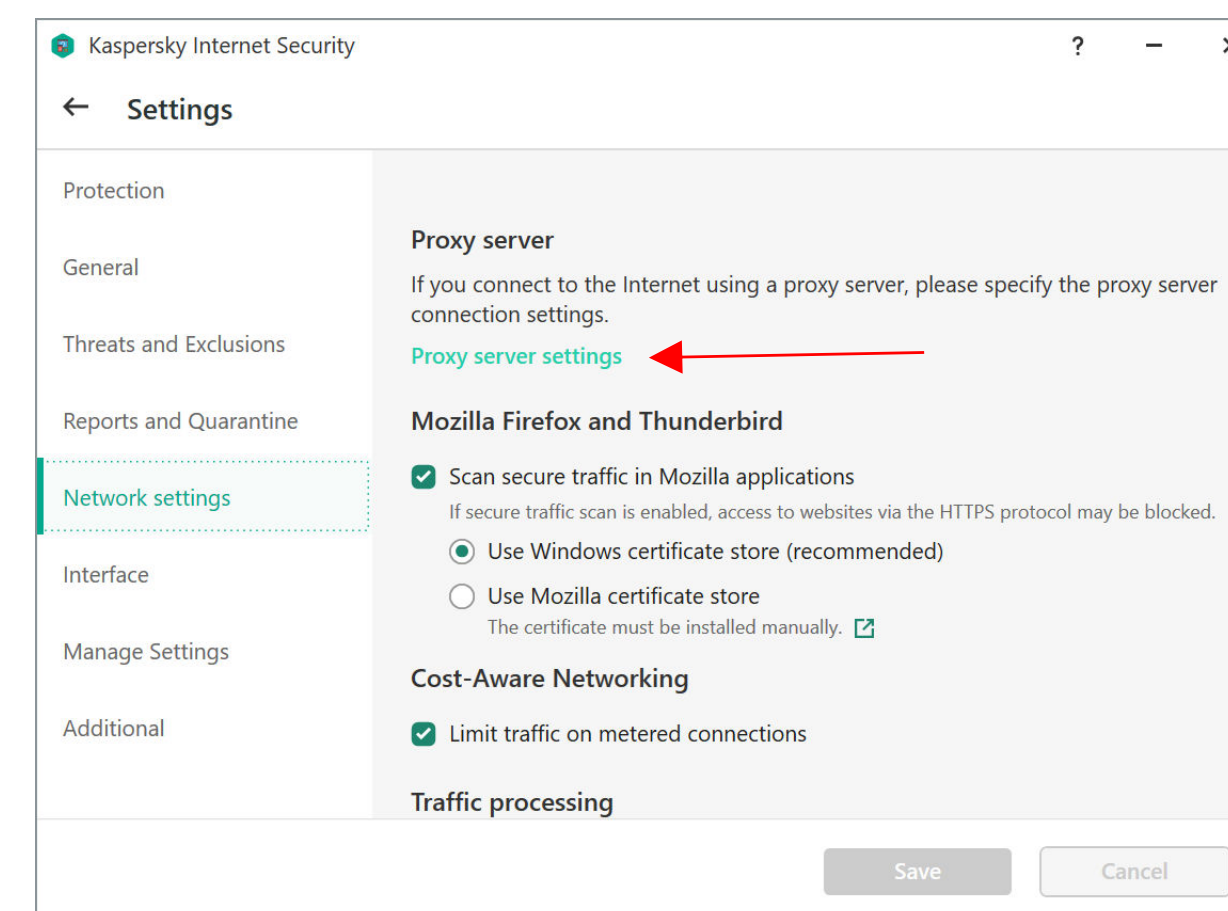

Step 4: Click **OK**.

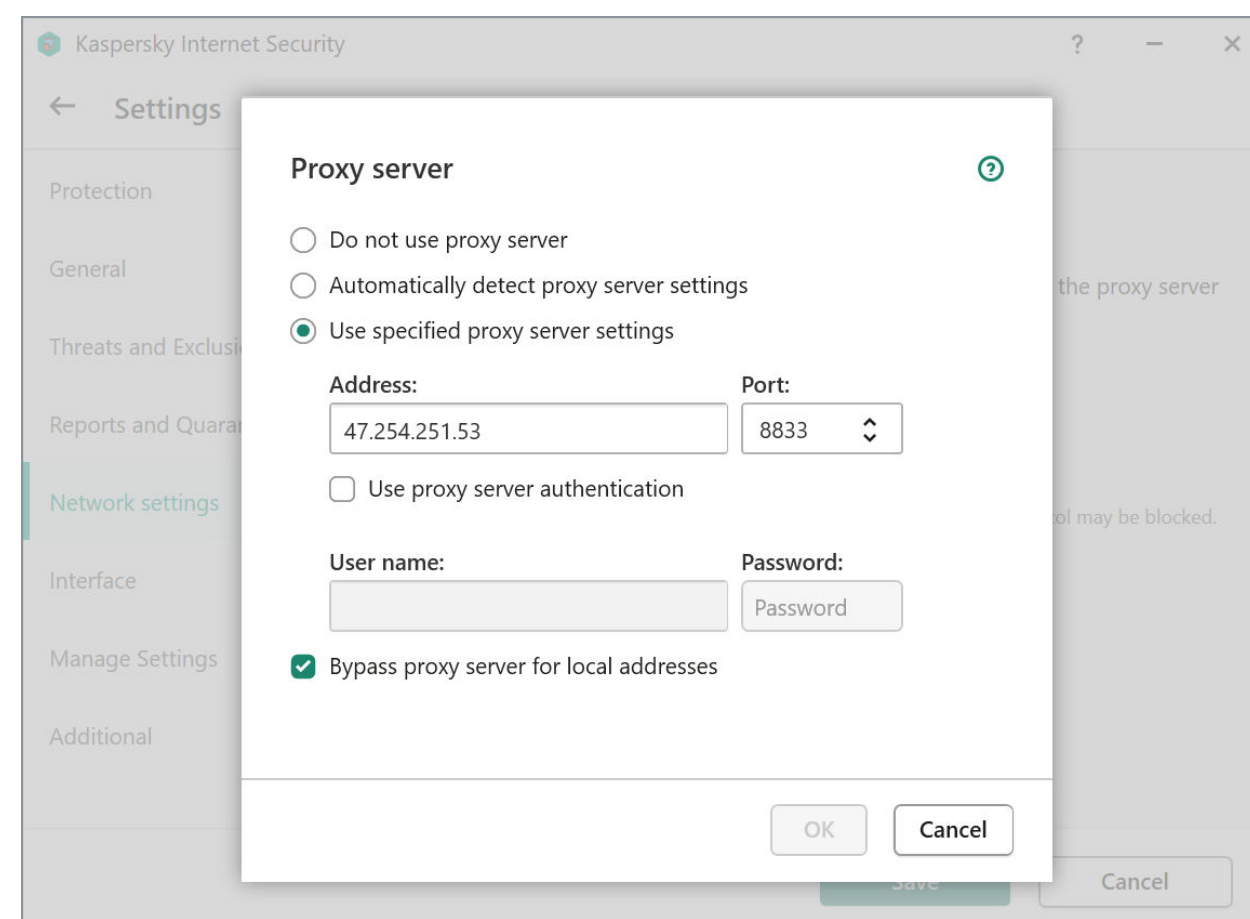

Step 5 : Launch Kaspersky application, and click on the **Settings** button.

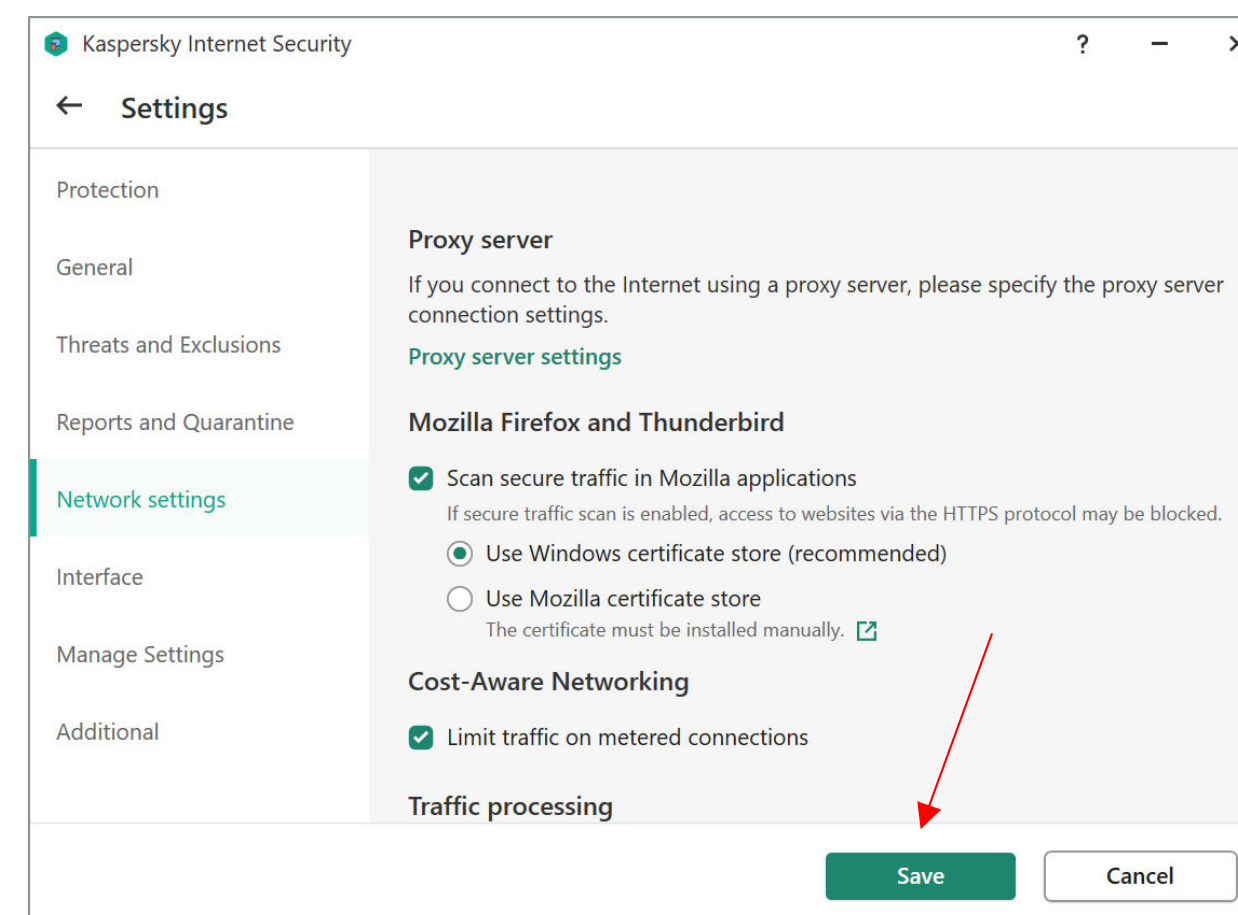

Step 6 : Click on the **Network settings** and look for **Proxy server setting**

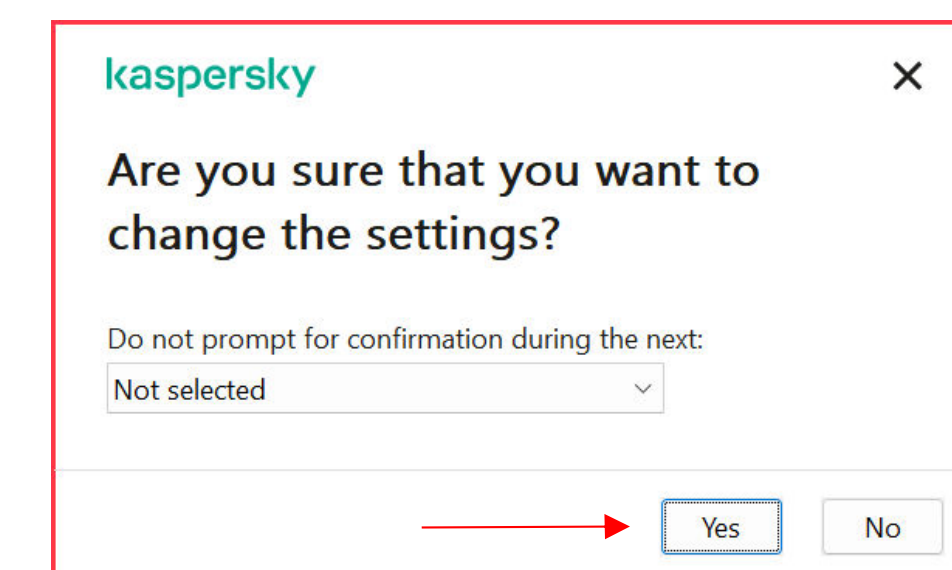

Step 7 : Please select **Use specified proxy server settings** and key in the same IP address and port number. Then click **OK** button.

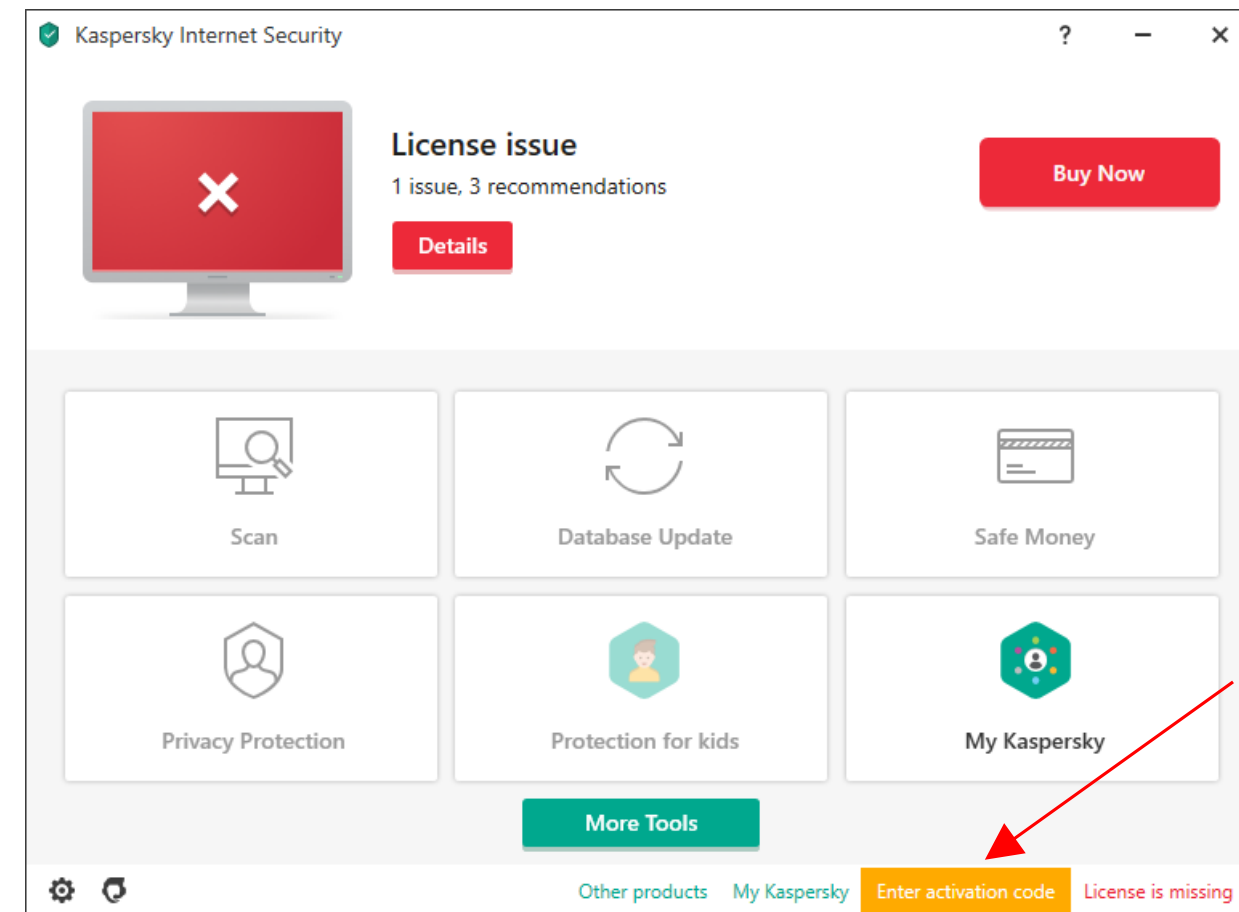

Step 8 : Click **Save** to save the settings.

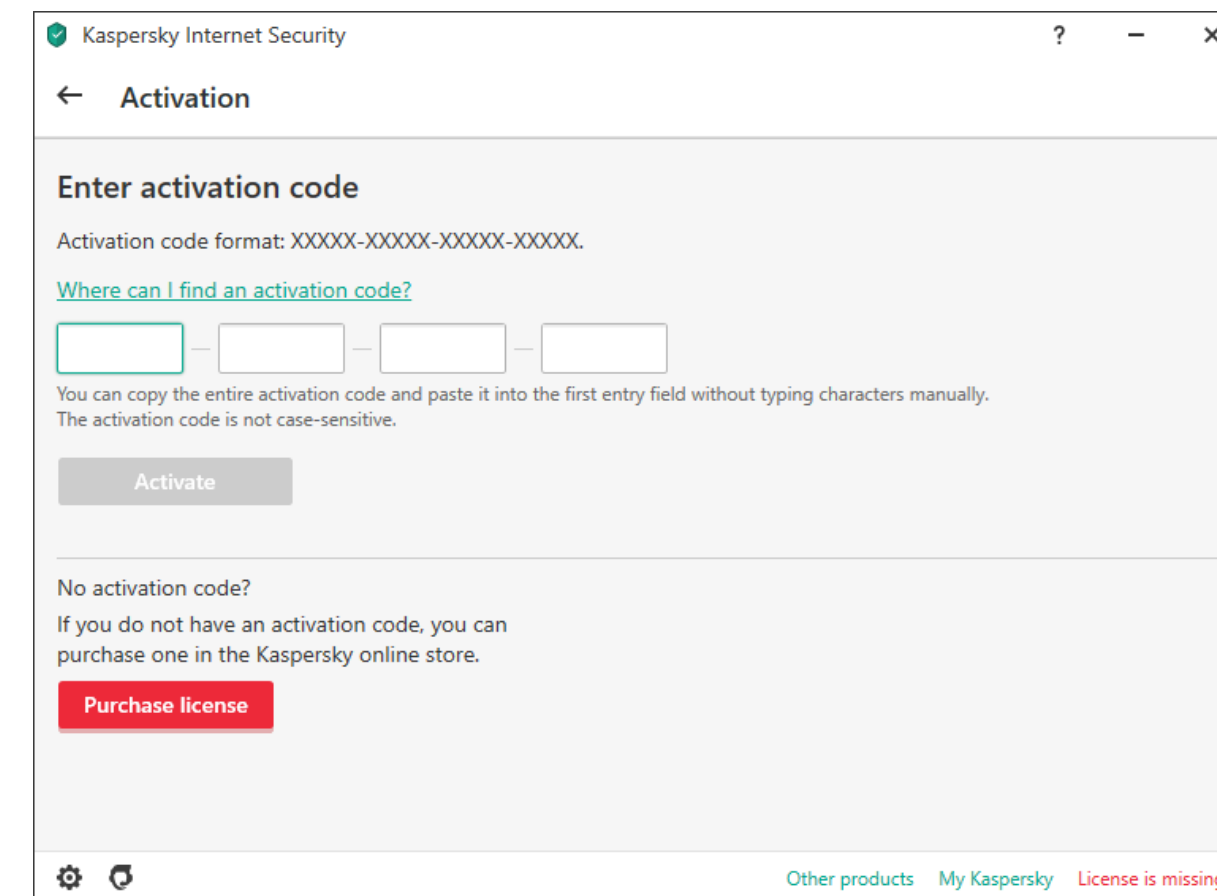

Step 9 : A notification will be prompting out after you've choose to change the settings, please click **Yes**.

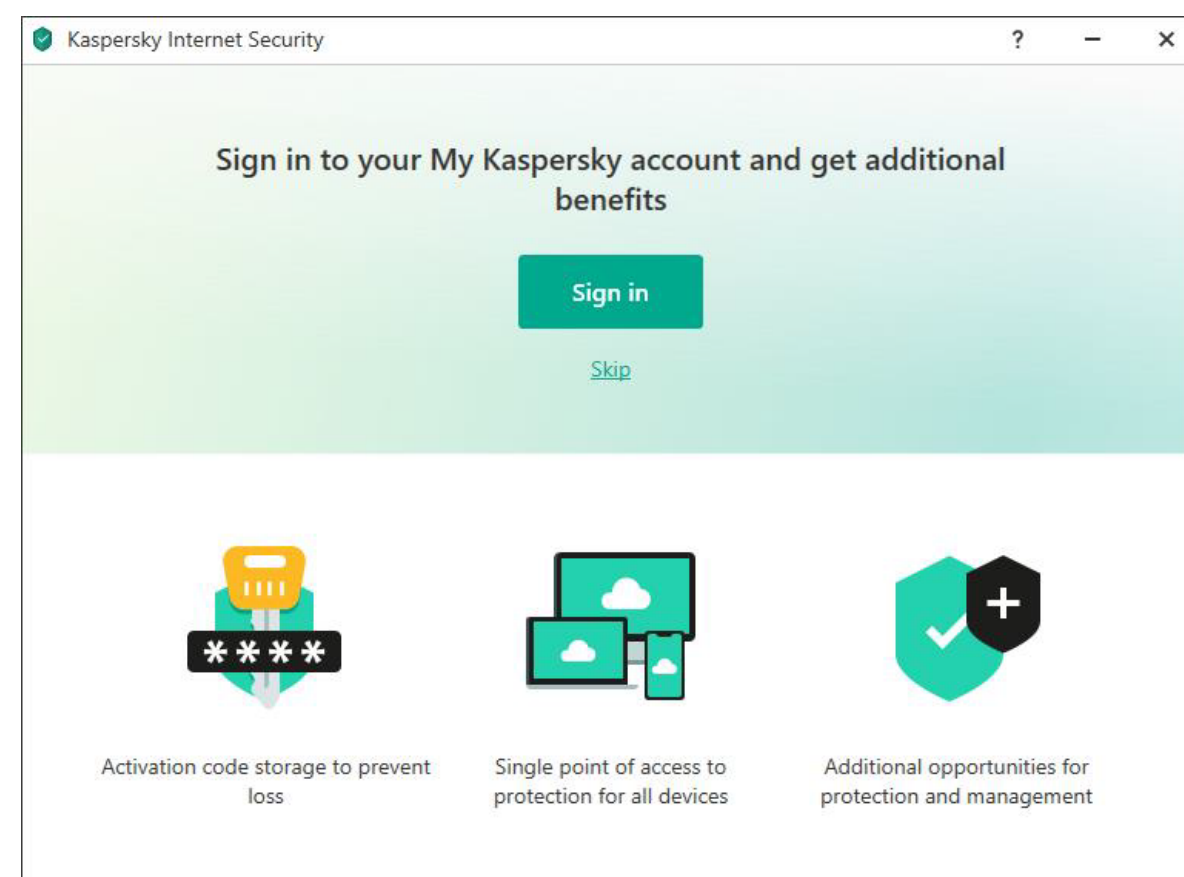

Step 10 : Go back to main screen and click on the **Enter activation code** button, or license remaining day.

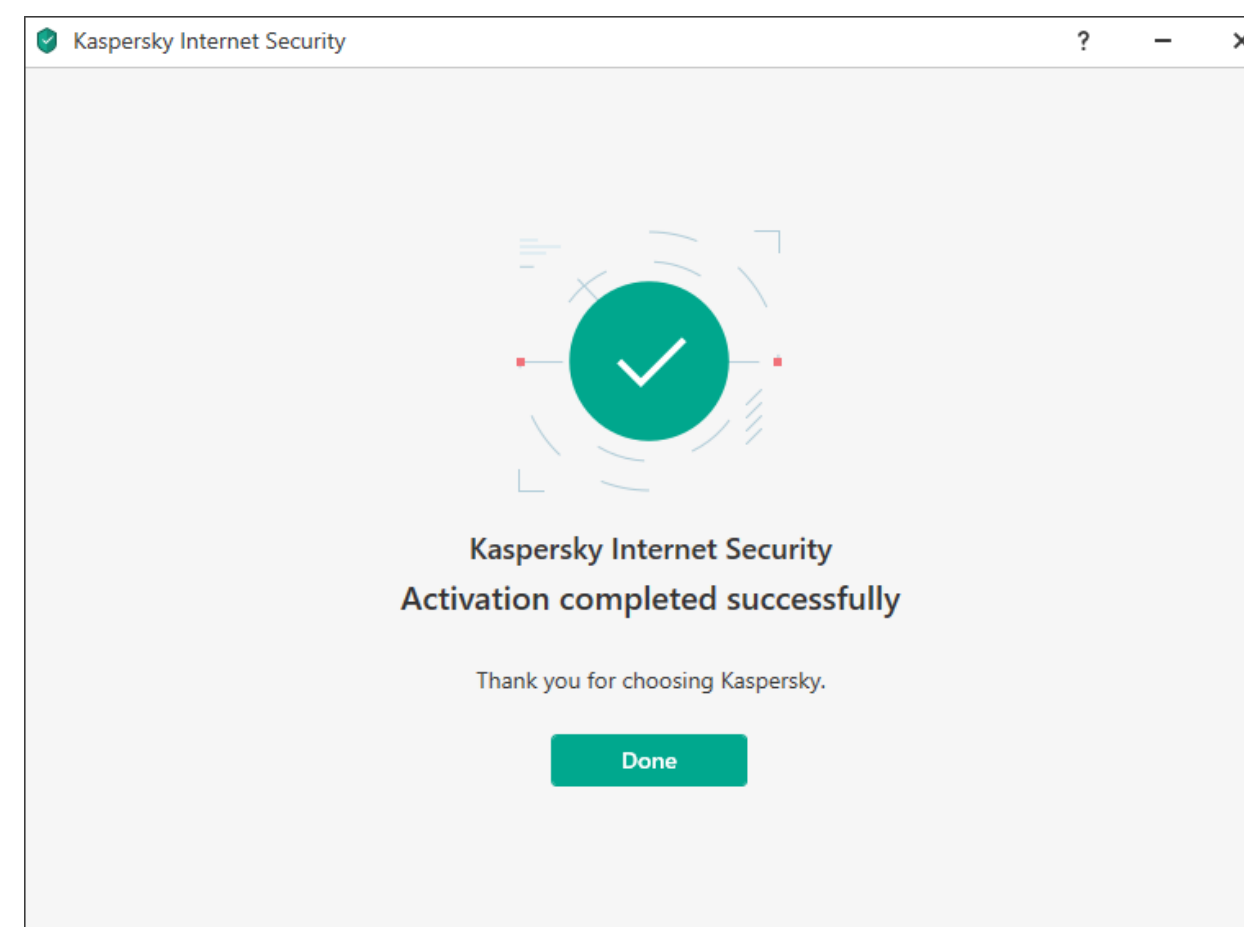

Step 11 : Key in the **activation code** on the box and click **Activate** button to activate the activation code.

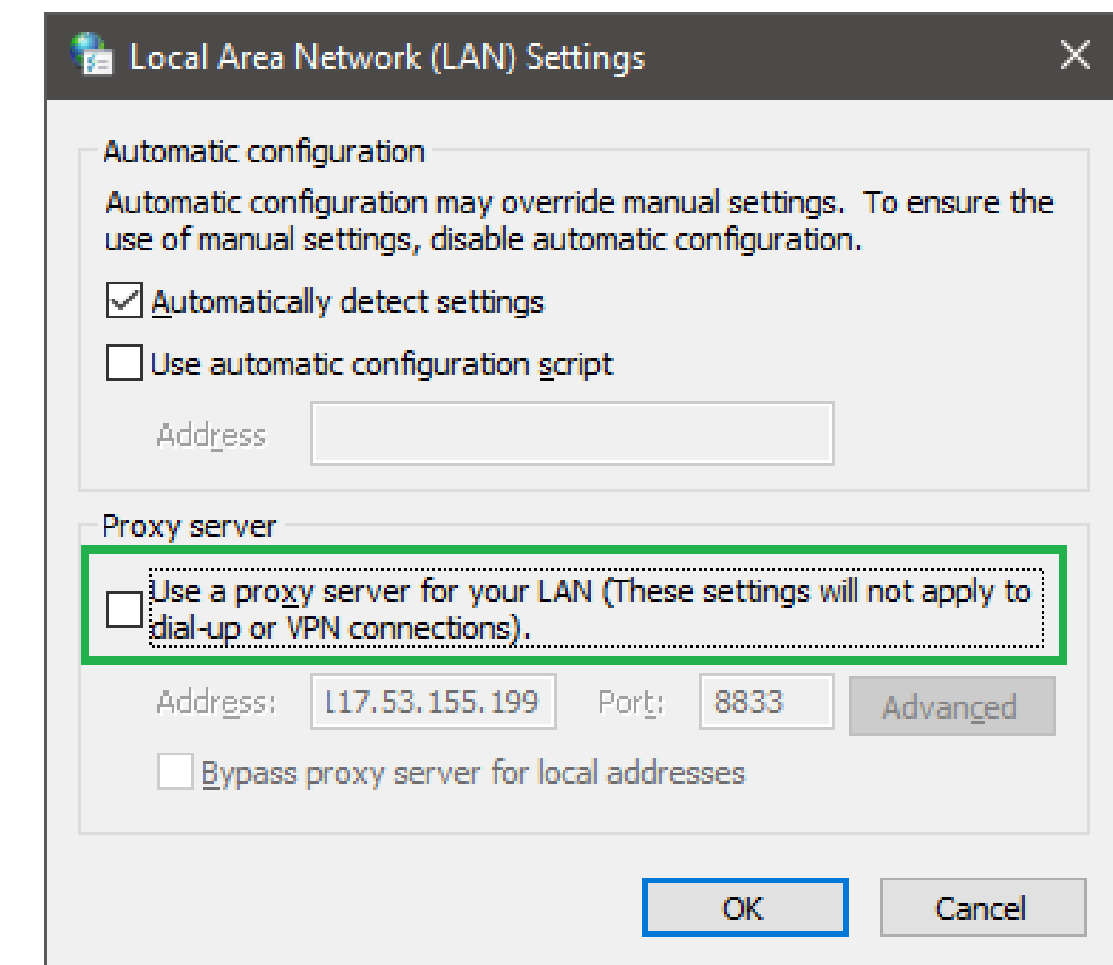

Step 12 : Click **Skip** button to complete the activation process.

Step 13 : Kaspersky application will show a message on successful activation.

Step 14 : After the application successfully activated, please turn off proxy server. Uncheck the box to disable/turn off proxy server.

Step 15 : Turn off proxy server in **Kaspersky** apps too. Please refer **Step 8**.
