

How to Set Up a Proxy and Activate **Kaspersky** Application (Kaspersky Standard, Kaspersky Plus)

Here is how to set a proxy manually in Windows 10 & Windows 11 (using Internet Options) :

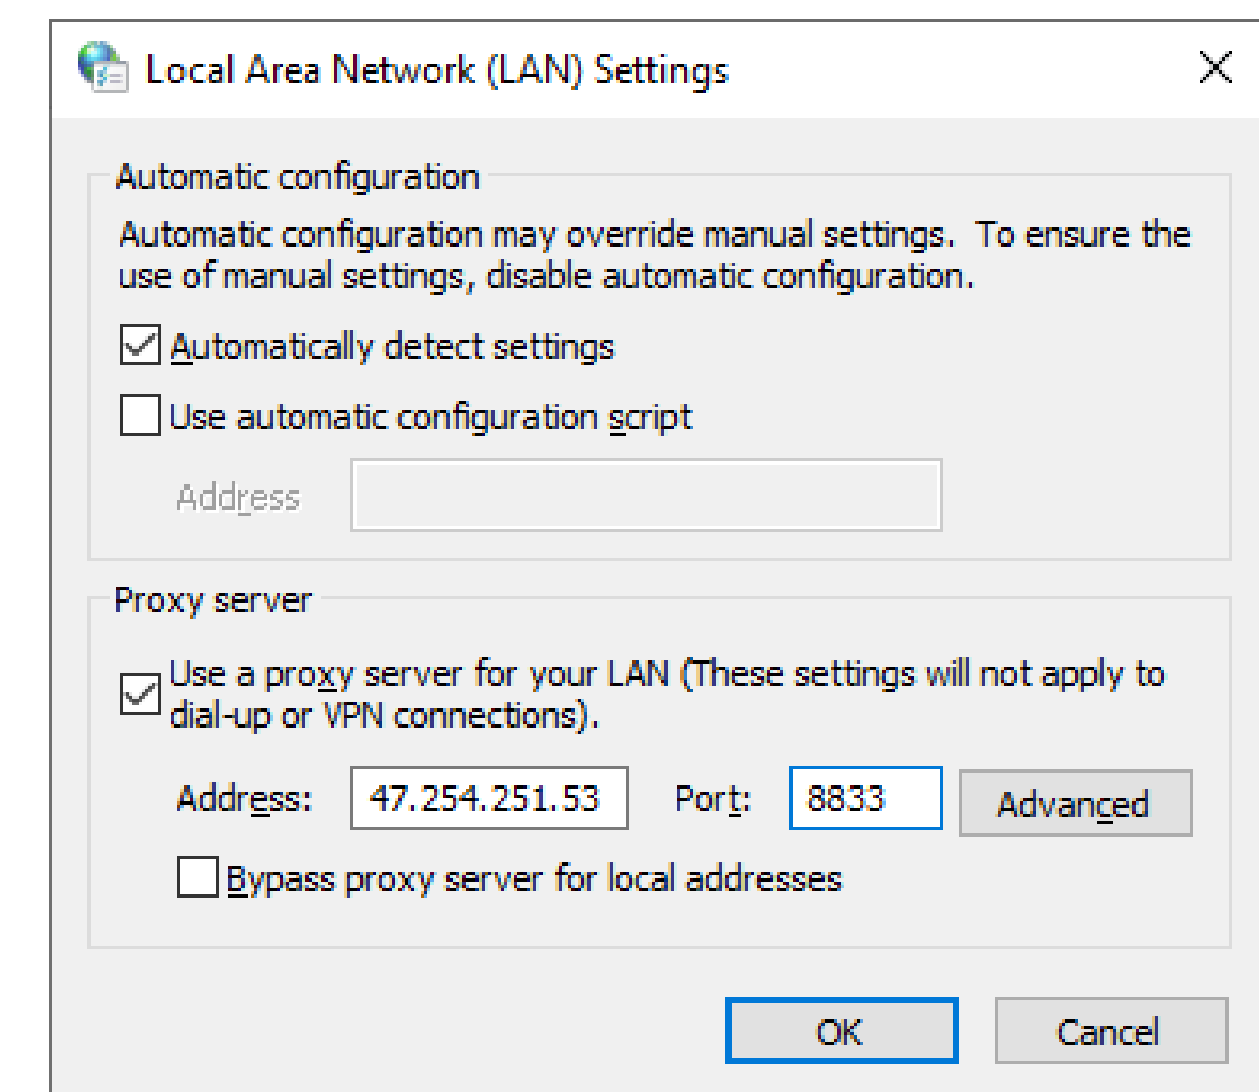

Step 1 : Click on the Windows Start button and search for **Internet Options**

Step 2 : In Internet Options, go to **Connections**, then click on **LAN settings**.

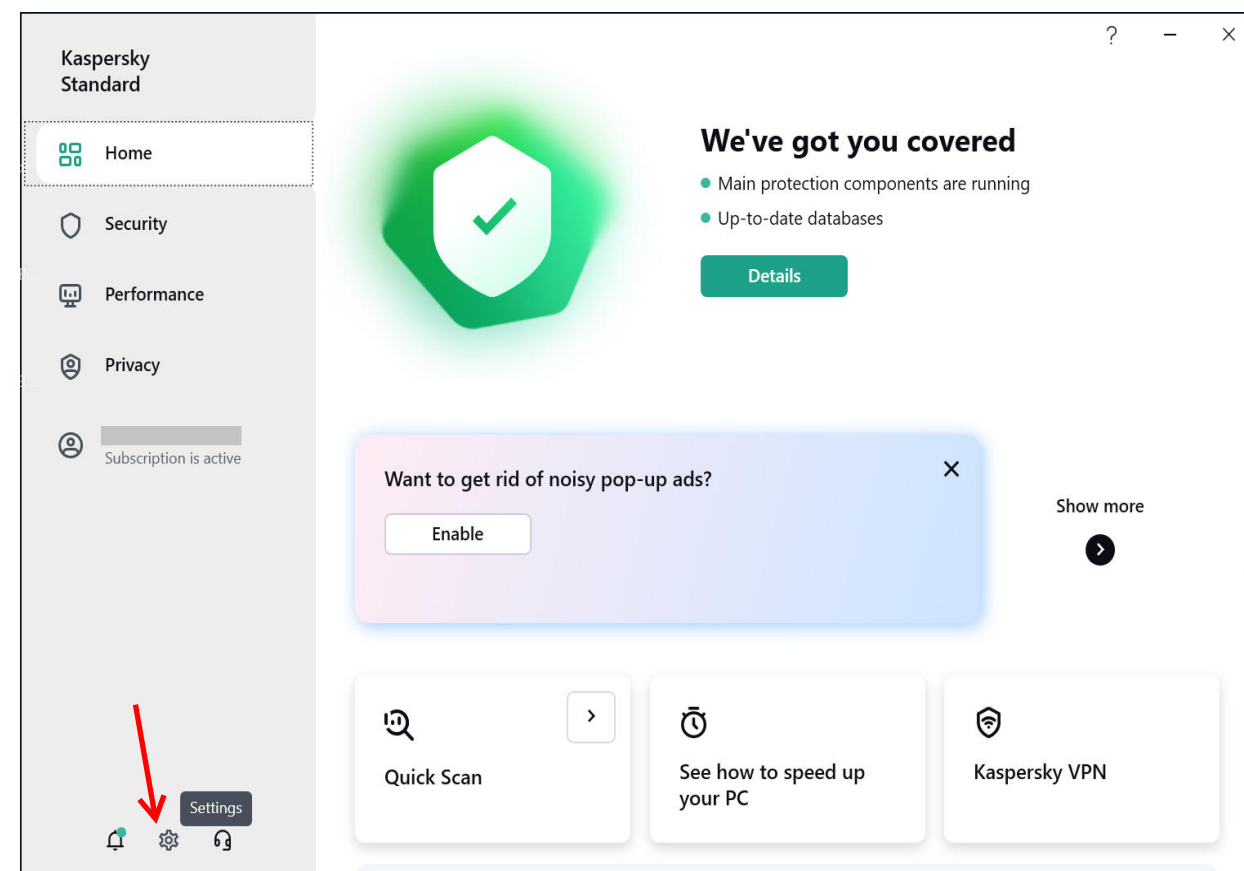

Step 3 : Under Proxy Server, please type the IP address (**47.254.251.53**) and port number (**8833**).

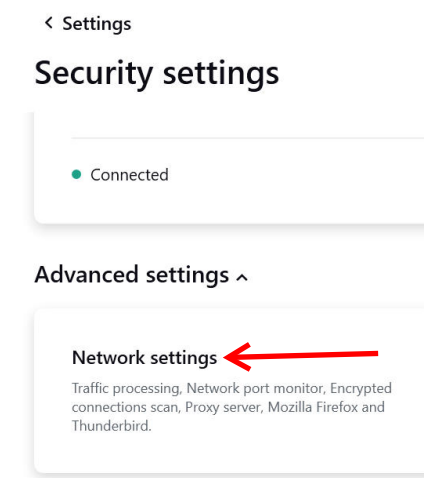

Step 4 : Click **OK**.

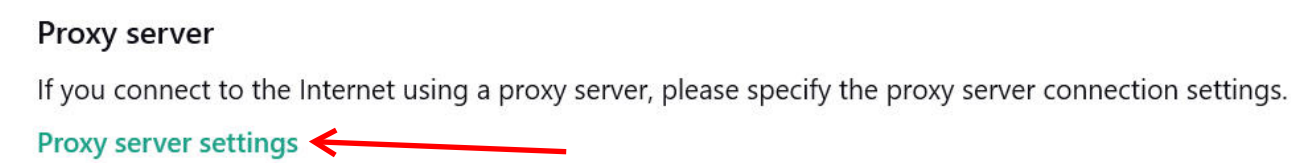

Step 5 : Launch Kaspersky application, and click on the **Settings** button.

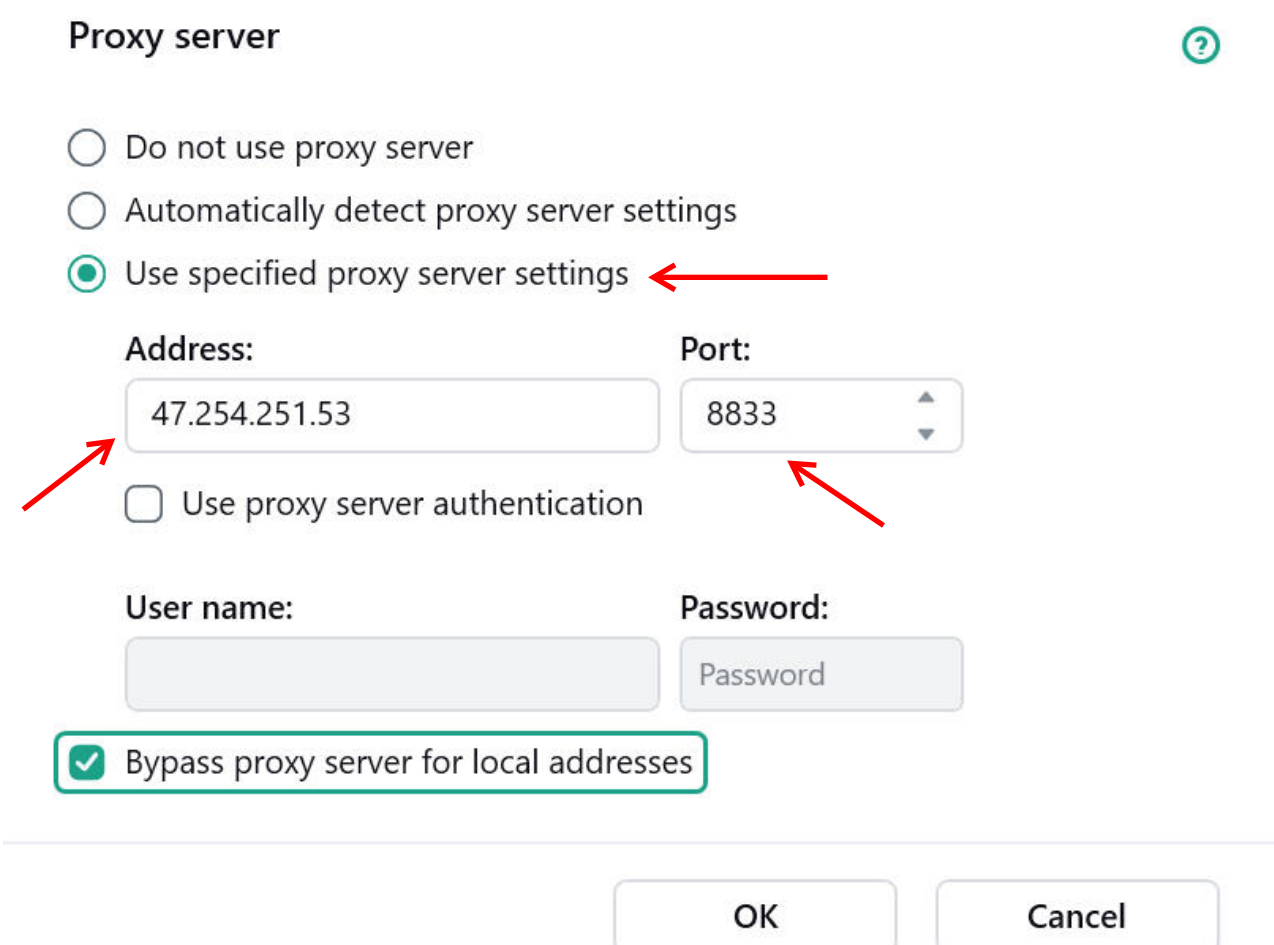

Step 6 : Click on the **Security settings** and look for **Network settings**

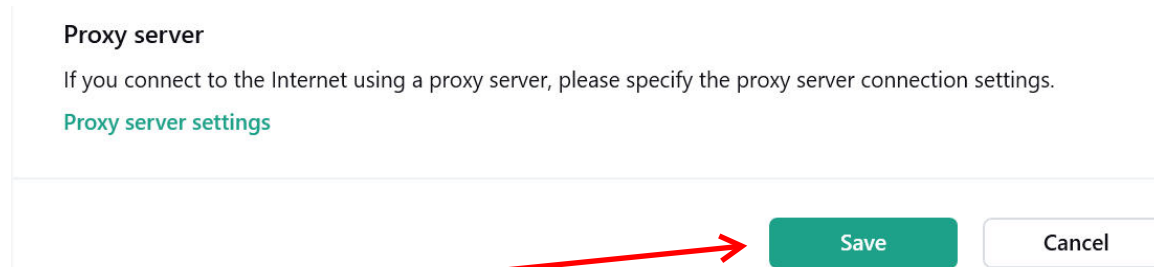

Step 7 : Look for **Proxy server** in **Network settings**

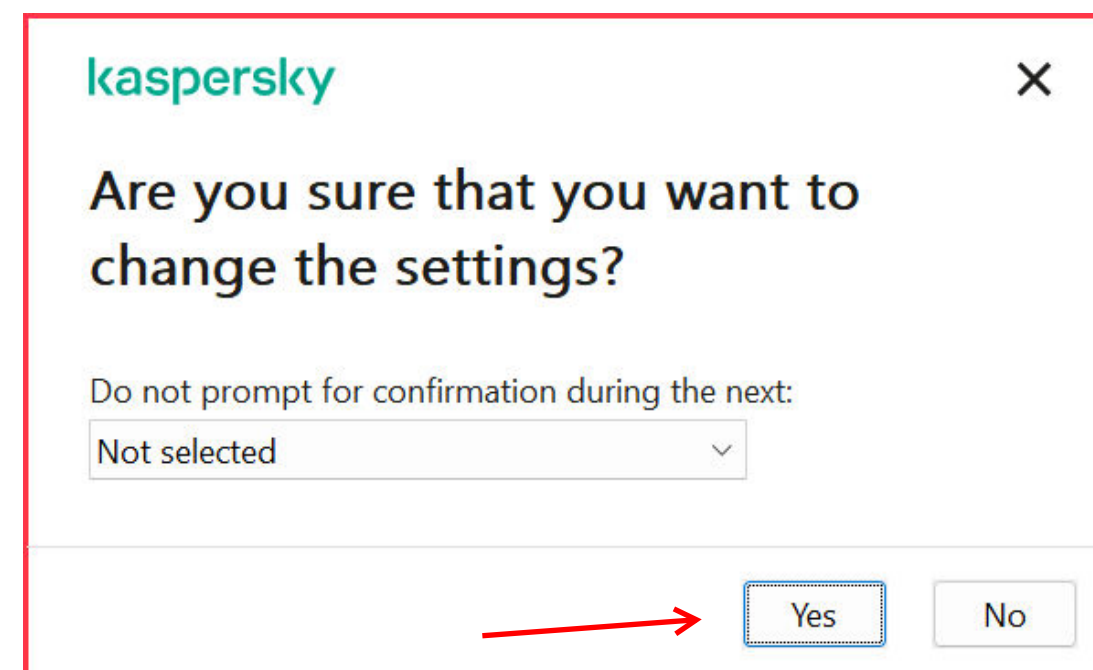

Step 8 : Please select **Use specified proxy server settings** and key in the same IP address and port number. Then click **OK** button.

Step 9 : Click **Save** to save the settings.

Step 10: A notification will be prompting out after you've choose to change the settings, please click **Yes**.

Step 11 : Re-activate your Kaspersky apps.

Step 12 : After the application successfully activated, please turn off proxy server. Uncheck the box to disable/turn off proxy server.

Step 13 : Turn off proxy server in Kaspersky apps too.
